

# BANK MANAGEMENT SYSTEM

## DYNAMITE

---

Minhazul Islam (221-35-932)  
Md. Shahorier (221-35-918)

Make it easy for users to make transactions,  
under any conditions.

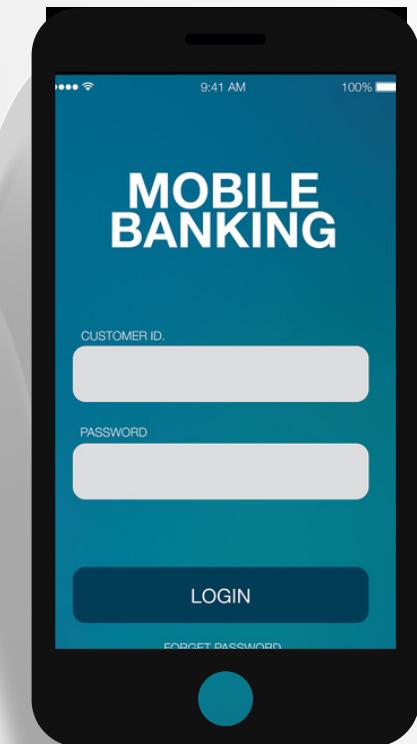

## Importance of a banks accounting system

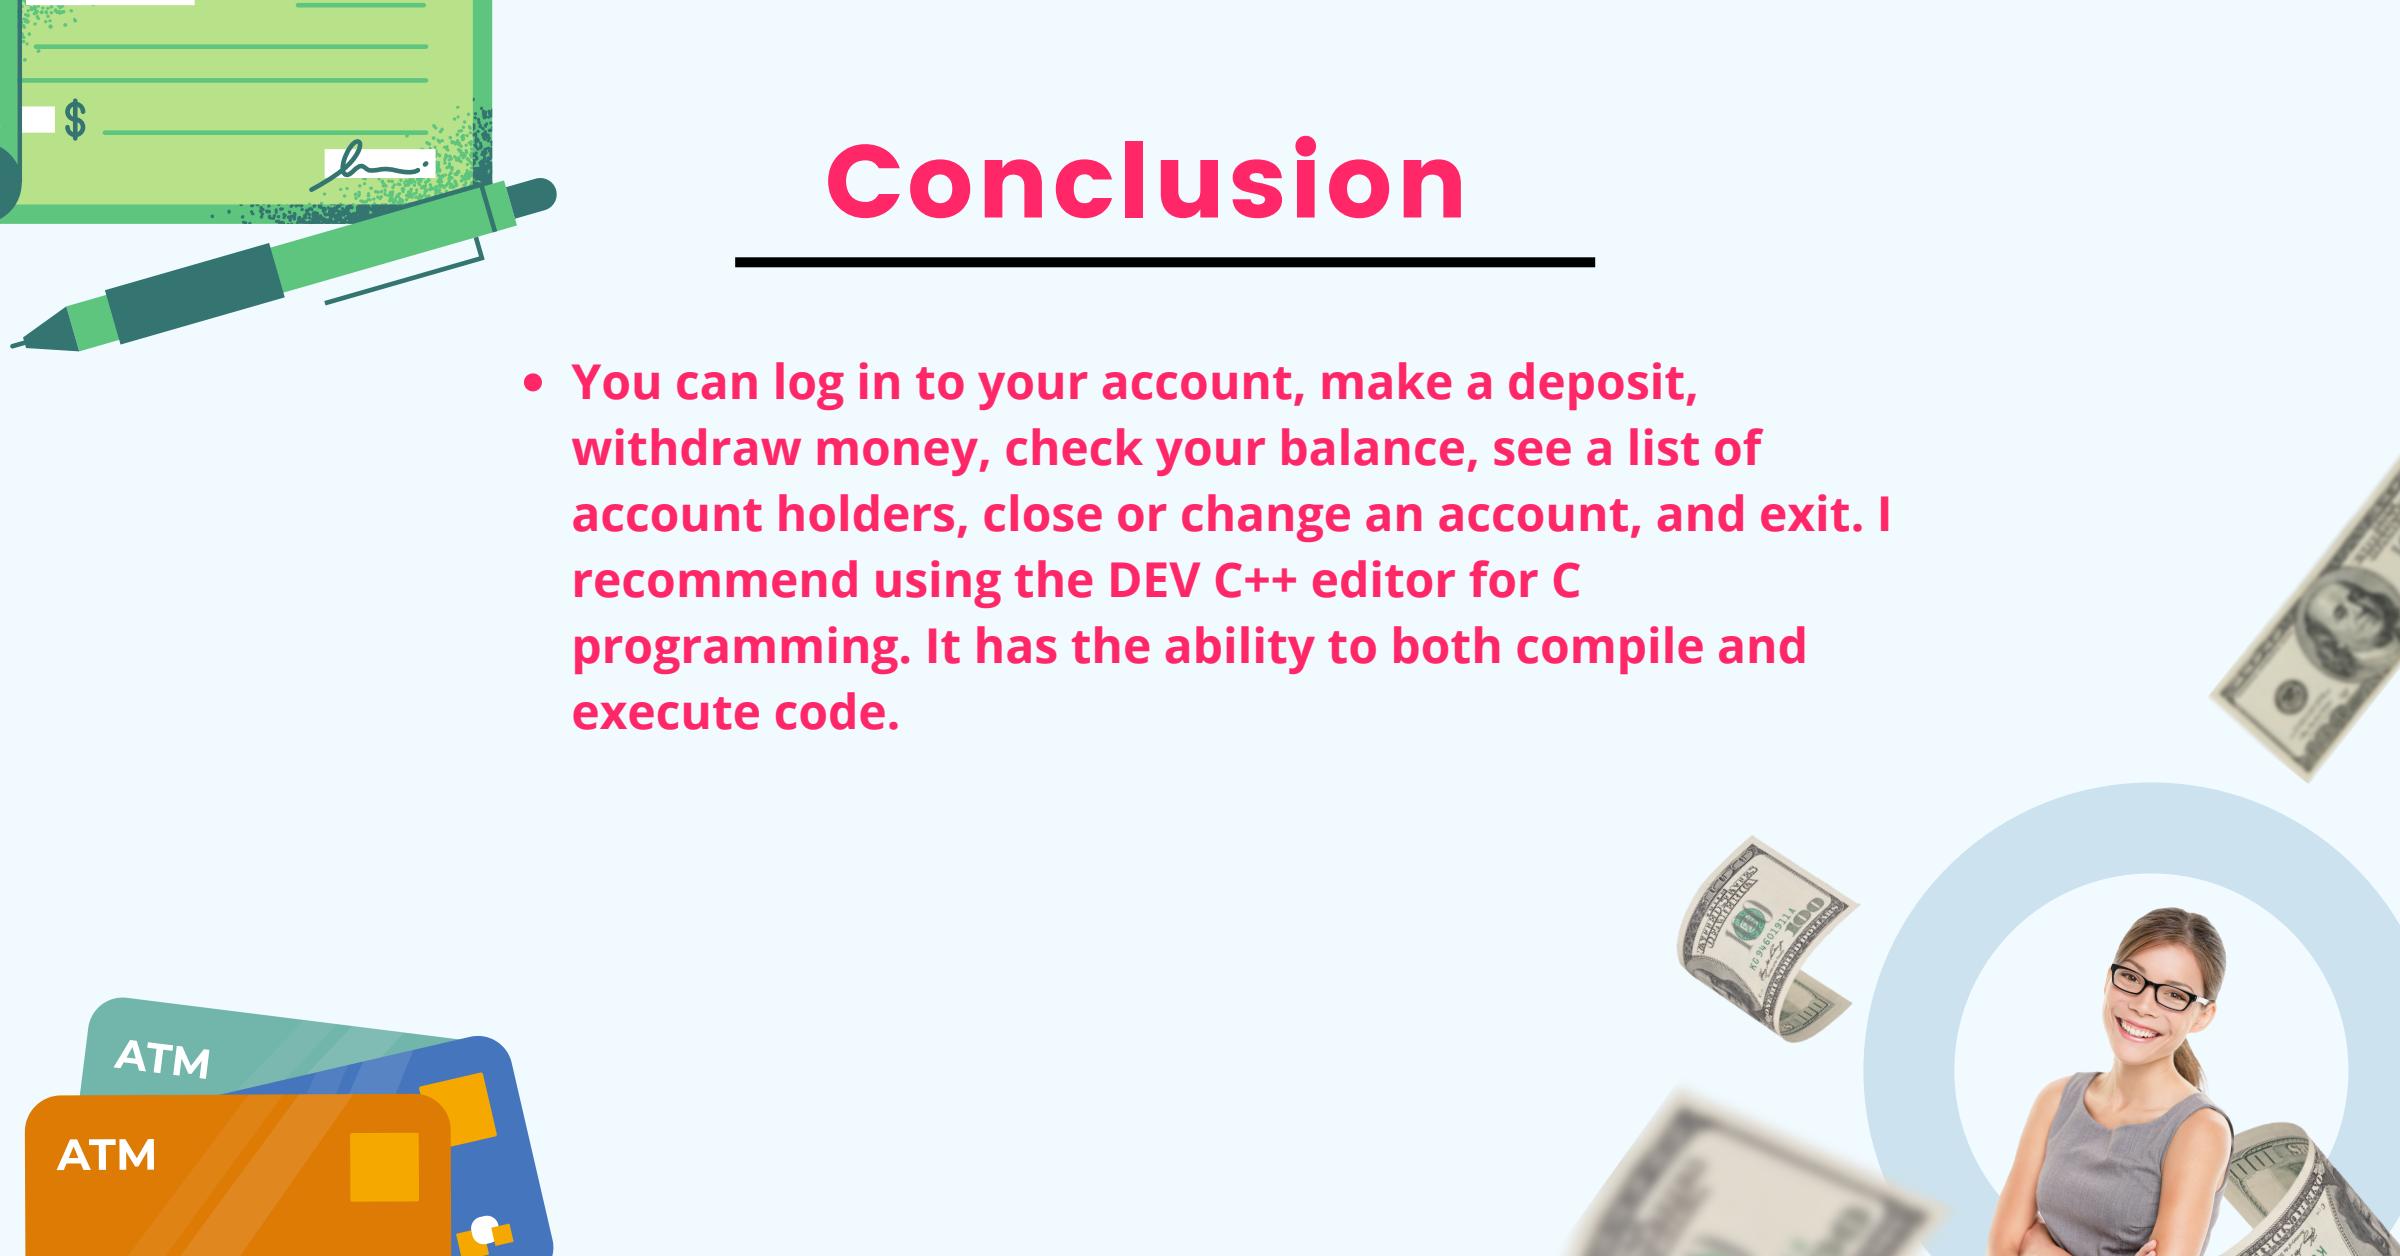

- Every year, banks are required to produce statutory accounts that reveal all of the company's assets. The primary goal of financial accounting is to generate financial reports that educate external parties such as investors, creditors, tax authorities, and others about the bank's performance.

# Major Functionalities Used in Bank Management System

1. **account()**- This function is used to create a new account.
2. **transfermoney()**- This function is used to transfer money to the account
3. **checkbalance()**- This function is used to check the balance in the account.
4. **login()**- This function is used to login into the account.

# Conclusion

---

- You can log in to your account, make a deposit, withdraw money, check your balance, see a list of account holders, close or change an account, and exit. I recommend using the DEV C++ editor for C programming. It has the ability to both compile and execute code.

# THANK YOU
